

Bitmunk Enterprise Server enables corporations to immediately sell digital content via the Internet.

As an enterprise, why would we want to use Bitmunk?

With Bitmunk, your enterprise can provide digital content sales services to your customers – powerful services that have been the domain of a select few digital media companies.

Bitmunk can generate more revenue for your corporation than any other digital content sales system in the world while you continue to own the relationship with your customers.

Bitmunk can handle the details of selling digital content while your corporation focuses on your customers.

How can Bitmunk generate revenue for our enterprise?

The main purpose of the Bitmunk Network is to enable customers to find and buy your digital content. Your company can continue to own the customer relationship while Bitmunk takes care of the rest.

Once your company installs a sales server and creates a catalog of digital content for sale, the content and prices are broadcast to anybody that is interested. Customers can then purchase the digital content that they are interested in directly from your enterprise.

Maintaining and improving your relationship with your customers is the most important thing to a growing enterprise.

Bitmunk helps new customers find you while showing your current customers that you are in control of the digital age.

What is the total cost of ownership for a Bitmunk Enterprise Server?

The majority of the software a corporation owns will not actively generate revenue – Bitmunk does. Each Bitmunk Enterprise Server is easy to configure. Register on Bitmunk, install the software, setup your catalog and immediately start selling your digital content – it is that easy.

The software handles all aspects of payment processing, accounting, royalty collection and contract negotiation. Bitmunk is a turn-key digital content sales solution that enables your corporation to take charge of the digital age.

Streamline your corporation's digital content distribution strategy with Bitmunk. The digital age moves fast - don't get left behind.
